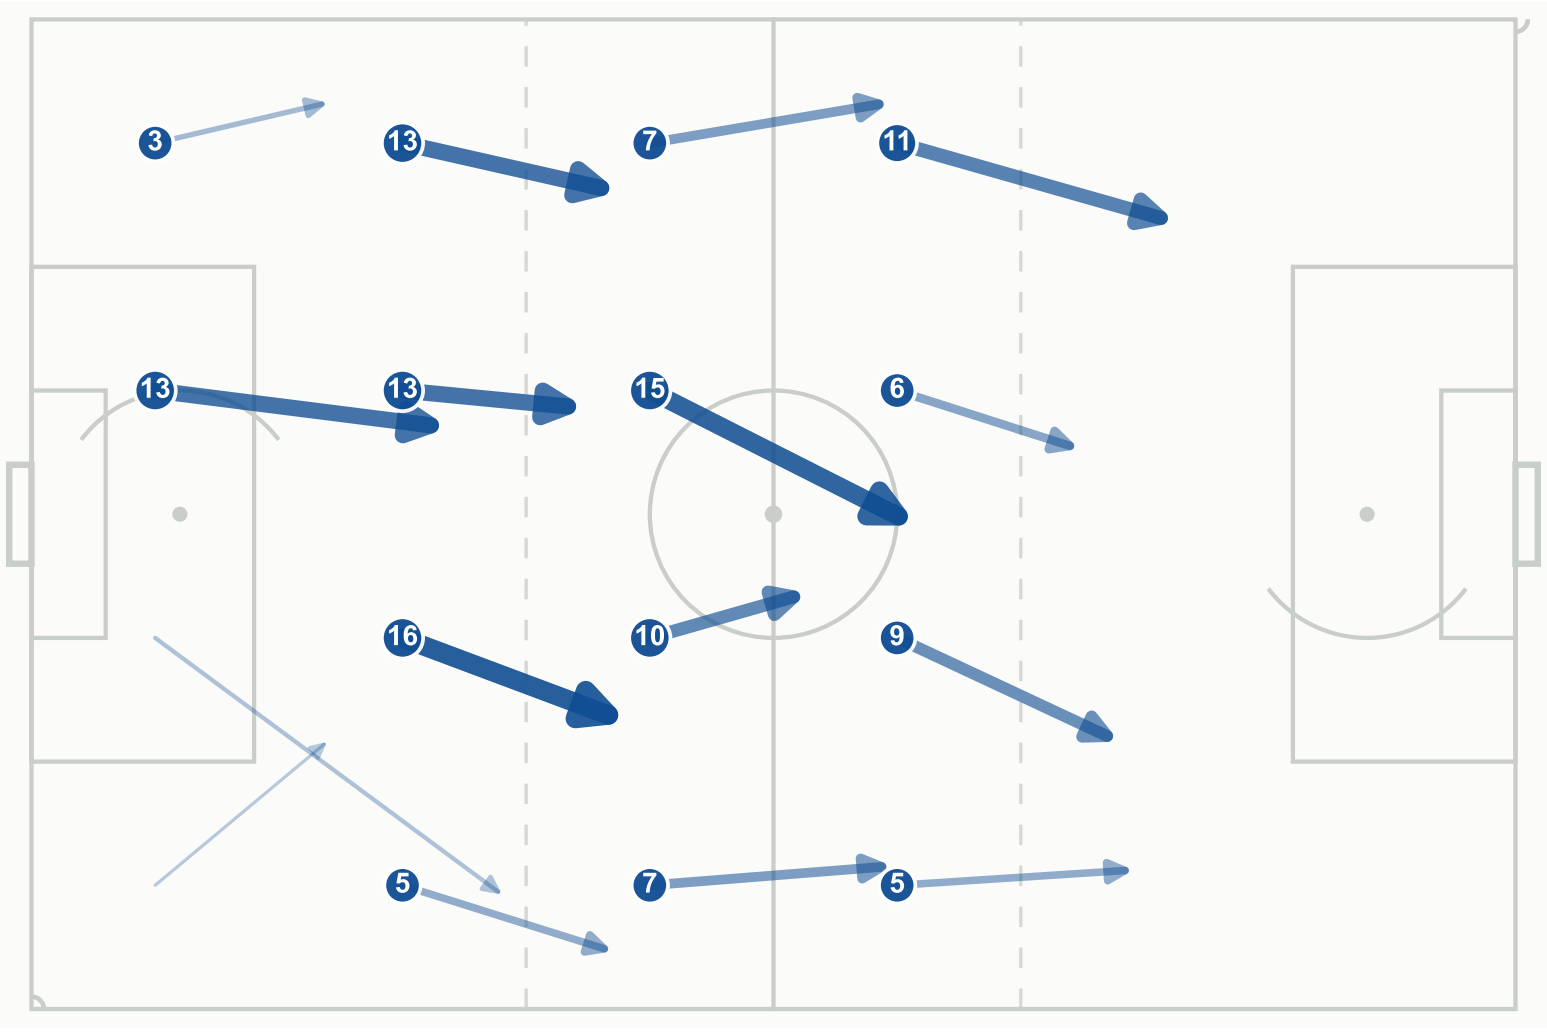
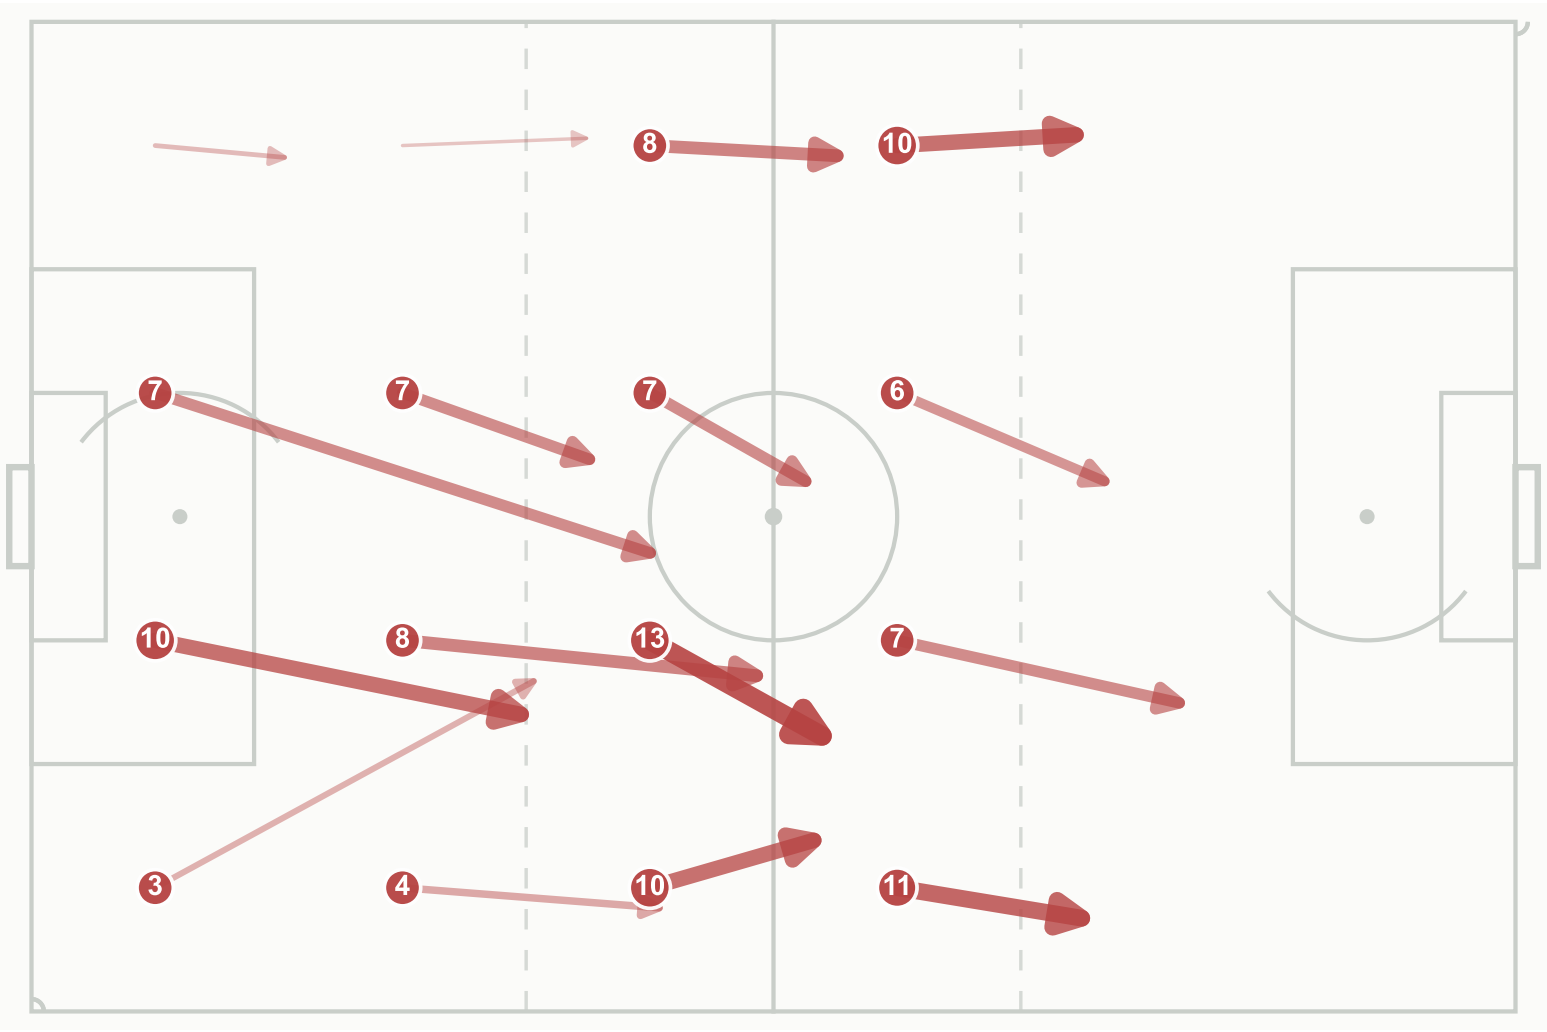
Progressive passing: from each zone, where does the ball go?

Argentina: 136 progressive passes · 3 played into the box



France: 114 progressive passes · 5 played into the box



A progressive pass advances the ball at least 10 yards up-pitch from the team's own 80 yards; completed only. Each arrow is one zone's mean direction and mean advance, sized by volume. Circled numbers mark zones with 3 or more progressive passes. Because arrows are averaged vectors, a zone that advances to both flanks can read as pointing sideways. Data provided by StatsBomb.
